EMERGENCY LIGHTING INVERTERS

6KW - 8KW - 10KW - 15KW - 17KW

NOVA INVERTERS

NOVA inverters convert normally on lighting into emergency lighting in the event of a power failure. Eliminate the need for stand alone emergency units, reduce maintenance and improve aesthetics. NOVA inverters offer high frequency, Pulse Width Modulated double conversion technology for a pure sine wave output. NOVA inverters are always active and have zero transfer time, constantly conditioning the incoming power and offering input power factor adjustment during normal utility power. A minimum 90 minute run time during power failure is standard.
